List of Figures	xiii
List of Tables	xxv
Preface	xxvii
Author.....	xxix
Chapter 1 Introduction	1
1.1 Prologue	1
1.2 Finite Element Analysis and the User	1
1.3 Aim of the Book.....	2
1.4 Book Organization	2
Chapter 2 Bar Element	5
2.1 Introduction	5
2.2 One-Dimensional Truss Element	5
2.2.1 Formulation of the Stiffness Matrix: The Direct Approach	5
2.2.2 Two-Dimensional Truss Element.....	7
2.3 Global Stiffness Matrix Assembly	9
2.3.1 Discretization	9
2.3.2 Elements' Stiffness Matrices in Local Coordinates.....	9
2.3.3 Elements' Stiffness Matrices in Global Coordinates.....	10
2.3.3.1 Element 1	11
2.3.3.2 Element 2	11
2.3.3.3 Element 3	12
2.3.4 Global Matrix Assembly	12
2.3.4.1 Only Element 1 Is Present.....	13
2.3.4.2 Only Element 2 Is Present.....	13
2.3.4.3 Only Element 3 Is Present.....	13
2.3.5 Global Force Vector Assembly	14
2.4 Boundary Conditions.....	15
2.4.1 General Case.....	15
2.5 Solution of the System of Equations	16
2.6 Support Reactions	17
2.7 Members' Forces	18
2.8 Computer Code: truss.m	19
2.8.1 Data Preparation	20
2.8.1.1 Nodes Coordinates.....	20
2.8.1.2 Element Connectivity.....	20
2.8.1.3 Material and Geometrical Properties	20
2.8.1.4 Boundary Conditions	20
2.8.1.5 Loading	21
2.8.2 Element Matrices	21
2.8.2.1 Stiffness Matrix in Local Coordinates	21
2.8.2.2 Transformation Matrix	22

2.8.2.3	Stiffness Matrix in Global Coordinates.....	22
2.8.2.4	“Steering” Vector	22
2.8.3	Assembly of the Global Stiffness Matrix.....	23
2.8.4	Assembly of the Global Force Vector	23
2.8.5	Solution of the Global System of Equations	23
2.8.6	Nodal Displacements	23
2.8.7	Element Forces	23
2.8.8	Program Scripts.....	24
2.9	Problems	27
2.9.1	Problem 2.1	27
2.9.2	Problem 2.2	32
2.10	Analysis of a Simple Truss with Abaqus	35
2.10.1	Overview of Abaqus	35
2.10.2	Analysis of a Truss with Abaqus Interactive Edition	36
2.10.2.1	Modeling.....	36
2.10.2.2	Analysis	51
2.10.3	Analysis of a Truss with Abaqus Keyword Edition.....	57
Chapter 3	Beam Element	63
3.1	Introduction	63
3.2	Stiffness Matrix.....	63
3.3	Uniformly Distributed Loading.....	67
3.4	Internal Hinge	71
3.5	Computer Code: beam.m.....	73
3.5.1	Data Preparation	73
3.5.1.1	Nodes Coordinates.....	73
3.5.1.2	Element Connectivity.....	74
3.5.1.3	Material and Geometrical Properties	74
3.5.1.4	Boundary Conditions	74
3.5.1.5	Internal Hinges.....	74
3.5.1.6	Loading	75
3.5.1.7	Stiffness Matrix	76
3.5.2	Assembly and Solution of the Global System of Equations	76
3.5.3	Nodal Displacements	76
3.5.4	Element Forces	77
3.6	Problems	81
3.6.1	Problem 3.1	81
3.6.2	Problem 3.2	84
3.6.3	Problem 3.3	87
3.7	Analysis of a Simple Beam with Abaqus	90
3.7.1	Interactive Edition	90
3.7.2	Analysis of a Beam with Abaqus Keyword Edition	103
Chapter 4	Rigid Jointed Frames	107
4.1	Introduction	107
4.2	Stiffness Matrix of a Beam–Column Element	107
4.3	Stiffness Matrix of a Beam–Column Element in the Presence of Hinged End	107

4.4	Global and Local Coordinate Systems	108
4.5	Global Stiffness Matrix Assembly and Solution for Unknown Displacements	109
4.6	Computer Code: frame.m	109
4.6.1	Data Preparation	109
4.6.1.1	Nodes Coordinates.....	110
4.6.1.2	Element Connectivity.....	110
4.6.1.3	Material and Geometrical Properties	110
4.6.1.4	Boundary Conditions	110
4.6.1.5	Internal Hinges.....	111
4.6.1.6	Loading	111
4.6.2	Element Matrices	112
4.6.2.1	Stiffness Matrix in Local Coordinates	112
4.6.2.2	Transformation Matrix	113
4.6.2.3	Stiffness Matrix in Global Coordinates.....	113
4.6.2.4	“Steering” Vector	113
4.6.2.5	Element Loads	113
4.6.3	Assembly of the Global Stiffness Matrix	113
4.6.4	Solution of the Global System of Equations	114
4.6.5	Nodal Displacements	114
4.6.6	Element Forces	114
4.7	Analysis of a Simple Frame with Abaqus	124
4.7.1	Interactive Edition	124
4.7.2	Keyword Edition.....	132
Chapter 5	Stress and Strain Analysis	135
5.1	Introduction	135
5.2	Stress Tensor.....	135
5.2.1	Definition	135
5.2.2	Stress Tensor–Stress Vector Relationships.....	137
5.2.3	Transformation of the Stress Tensor.....	139
5.2.4	Equilibrium Equations	139
5.2.5	Principal Stresses	140
5.2.6	von Mises Stress	141
5.2.7	Normal and Tangential Components of the Stress Vector	141
5.2.8	Mohr’s Circles for Stress	143
5.2.9	Engineering Representation of Stress	144
5.3	Deformation and Strain	144
5.3.1	Definition	144
5.3.2	Lagrangian and Eulerian Descriptions.....	145
5.3.3	Displacement	146
5.3.4	Displacement and Deformation Gradients	147
5.3.5	Green Lagrange Strain Matrix	148
5.3.6	Small Deformation Theory.....	149
5.3.6.1	Infinitesimal Strain	149
5.3.6.2	Geometrical Interpretation of the Terms of the Strain Tensor	150
5.3.6.3	Compatibility Conditions	152
5.3.7	Principal Strains	152

5.3.8	Transformation of the Strain Tensor	153
5.3.9	Engineering Representation of Strain	153
5.4	Stress–Strain Constitutive Relations.....	154
5.4.1	Generalized Hooke’s Law	154
5.4.2	Material Symmetries	155
5.4.2.1	Symmetry with respect to a Plane	155
5.4.2.2	Symmetry with respect to Three Orthogonal Planes	157
5.4.2.3	Symmetry of Rotation with respect to One Axis	157
5.4.3	Isotropic Material.....	158
5.4.3.1	Modulus of Elasticity	160
5.4.3.2	Poisson’s Ratio.....	160
5.4.3.3	Shear Modulus	160
5.4.3.4	Bulk Modulus	160
5.4.4	Plane Stress and Plane Strain	162
5.5	Solved Problems.....	163
5.5.1	Problem 5.1	163
5.5.2	Problem 5.2	164
5.5.3	Problem 5.3	167
5.5.4	Problem 5.4	168
5.5.5	Problem 5.5	170
5.5.6	Problem 5.6	171
5.5.7	Problem 5.7	172
5.5.8	Problem 5.8	174
Chapter 6	Weighted Residual Methods	175
6.1	Introduction	175
6.2	General Formulation	175
6.3	Galerkin Method	176
6.4	Weak Form.....	178
6.5	Integrating by Part over Two and Three Dimensions (Green Theorem)	179
6.6	Rayleigh Ritz Method	183
6.6.1	Definition	183
6.6.2	Functional Associated with an Integral Form	183
6.6.3	Rayleigh Ritz Method	183
6.6.4	Example of a Natural Functional	185
Chapter 7	Finite Element Approximation	191
7.1	Introduction	191
7.2	General and Nodal Approximations	191
7.3	Finite Element Approximation	193
7.4	Basic Principles for the Construction of Trial Functions	195
7.4.1	Compatibility Principle.....	195
7.4.2	Completeness Principle	196
7.5	Two-Dimensional Finite Element Approximation	197
7.5.1	Plane Linear Triangular Element for C^0 Problems	197
7.5.1.1	Shape Functions	197
7.5.1.2	Reference Element.....	199
7.5.1.3	Area Coordinates	202
7.5.2	Linear Quadrilateral Element for C^0 Problems	203

7.5.2.1	Geometrical Transformation	203
7.5.2.2	Construction of a Trial Function over a Linear Quadrilateral Element	206
7.6	Shape Functions of Some Classical Elements for C^0 Problems.....	207
7.6.1	One-Dimensional Elements	207
7.6.1.1	Two-Nodded Linear Element	207
7.6.1.2	Three-Nodded Quadratic Element	207
7.6.2	Two-Dimensional Elements	207
7.6.2.1	Four-Nodded Bilinear Quadrilateral	207
7.6.2.2	Eight-Nodded Quadratic Quadrilateral	208
7.6.2.3	Three-Nodded Linear Triangle	208
7.6.2.4	Six-Nodded Quadratic Triangle.....	208
7.6.3	Three-Dimensional Elements	208
7.6.3.1	Four-Nodded Linear Tetrahedra	208
7.6.3.2	Ten-Nodded Quadratic Tetrahedra	209
7.6.3.3	Eight-Nodded Linear Brick Element	209
7.6.3.4	Twenty-Nodded Quadratic Brick Element	210
Chapter 8	Numerical Integration	211
8.1	Introduction	211
8.2	Gauss Quadrature.....	211
8.2.1	Integration over an Arbitrary Interval $[a, b]$	214
8.2.2	Integration in Two and Three Dimensions	215
8.3	Integration over a Reference Element	216
8.4	Integration over a Triangular Element.....	217
8.4.1	Simple Formulas.....	217
8.4.2	Numerical Integration over a Triangular Element	218
8.5	Solved Problems.....	219
8.5.1	Problem 8.1	219
8.5.2	Problem 8.2	221
8.5.3	Problem 8.3	226
Chapter 9	Plane Problems.....	231
9.1	Introduction	231
9.2	Finite Element Formulation for Plane Problems	231
9.3	Spatial Discretization.....	234
9.4	Constant Strain Triangle	235
9.4.1	Displacement Field	236
9.4.2	Strain Matrix	237
9.4.3	Stiffness Matrix	237
9.4.4	Element Force Vector	237
9.4.4.1	Body Forces	238
9.4.4.2	Traction Forces	238
9.4.4.3	Concentrated Forces	239
9.4.5	Computer Codes Using the Constant Strain Triangle.....	240
9.4.5.1	Data Preparation	241
9.4.5.2	Nodes Coordinates	243
9.4.5.3	Element Connectivity	243
9.4.5.4	Material Properties	243

9.4.5.5	Boundary Conditions	243
9.4.5.6	Loading	243
9.4.5.7	Main Program.....	243
9.4.5.8	Element Stiffness Matrix	245
9.4.5.9	Assembly of the Global Stiffness Matrix	246
9.4.5.10	Solution of the Global System of Equations	246
9.4.5.11	Nodal Displacements	246
9.4.5.12	Element Stresses and Strains	246
9.4.5.13	Results and Discussion	247
9.4.5.14	Program with Automatic Mesh Generation	249
9.4.6	Analysis with Abaqus Using the CST	253
9.4.6.1	Interactive Edition	253
9.4.6.2	Keyword Edition	260
9.5	Linear Strain Triangle	263
9.5.1	Displacement Field	264
9.5.2	Strain Matrix	265
9.5.3	Stiffness Matrix	266
9.5.4	Computer Code: LST_PLANE_STRESS_MESH.m	266
9.5.4.1	Numerical Integration of the Stiffness Matrix	270
9.5.4.2	Computation of the Stresses and Strains	271
9.5.5	Analysis with Abaqus Using the LST	272
9.5.5.1	Interactive Edition	272
9.5.5.2	Keyword Edition	278
9.6	The Bilinear Quadrilateral	279
9.6.1	Displacement Field	280
9.6.2	Strain Matrix	281
9.6.3	Stiffness Matrix	282
9.6.4	Element Force Vector	282
9.6.5	Computer Code: Q4_PLANE_STRESS.m	284
9.6.5.1	Data Preparation	284
9.6.5.2	Main Program.....	287
9.6.5.3	Integration of the Stiffness Matrix	289
9.6.5.4	Computation of the Stresses and Strains	290
9.6.5.5	Program with Automatic Mesh Generation	291
9.6.6	Analysis with Abaqus Using the Q4 Quadrilateral	295
9.6.6.1	Interactive Edition	295
9.6.6.2	Keyword Edition	302
9.7	The 8-Node Quadrilateral	304
9.7.1	Formulation	304
9.7.2	Equivalent Nodal Forces	307
9.7.3	Program Q8_PLANE_STRESS.m.....	307
9.7.3.1	Data Preparation	307
9.7.3.2	Main Program.....	311
9.7.3.3	Integration of the Stiffness Matrix	314
9.7.3.4	Results with the Coarse Mesh.....	314
9.7.3.5	Program with Automatic Mesh Generation	315
9.7.4	Analysis with Abaqus Using the Q8 Quadrilateral	321
9.8	Solved Problem with MATLAB®	326

9.8.1	Strip Footing with the CST Element	326
9.8.2	Strip Footing with the LST Element	331
9.8.3	Bridge Pier with the Q8 Element.....	336
Chapter 10	Axisymmetric Problems	353
10.1	Definition	353
10.2	Strain–Displacement Relationship	353
10.3	Stress–Strain Relations	354
10.4	Finite Element Formulation	355
10.4.1	Displacement Field	355
10.4.2	Strain Matrix	355
10.4.3	Stiffness Matrix	356
10.4.4	Nodal Force Vectors	356
10.4.4.1	Body Forces	356
10.4.4.2	Surface Forces Vector.....	356
10.4.4.3	Concentrated Loads.....	357
10.4.4.4	Example	357
10.5	Programming.....	358
10.5.1	Computer Code: AXI_SYM_T6.m	359
10.5.1.1	Numerical Integration of the Stiffness Matrix.....	362
10.5.1.2	Results	363
10.5.2	Computer Code: AXI_SYM_Q8.m	365
10.5.2.1	Numerical Integration of the Stiffness Matrix.....	368
10.5.2.2	Results	370
10.6	Analysis with Abaqus Using the 8-Node Quadrilateral.....	372
Chapter 11	Thin and Thick Plates	379
11.1	Introduction	379
11.2	Thin Plates	379
11.2.1	Differential Equation of Plates Loaded in Bending.....	379
11.2.2	Governing Equation in terms of Displacement Variables	382
11.3	Thick Plate Theory or Mindlin Plate Theory	383
11.3.1	Stress–Strain Relationship.....	384
11.4	Linear Elastic Finite Element Analysis of Plates.....	385
11.4.1	Finite Element Formulation for Thin Plates	385
11.4.1.1	Triangular Element.....	385
11.4.1.2	Rectangular Element.....	387
11.4.2	Finite Element Formulation for Thick Plates	388
11.5	Boundary Conditions	389
11.5.1	Simply Supported Edge	389
11.5.2	Built-in or Clamped Edge	390
11.5.3	Free Edge.....	390
11.6	Computer Program for Thick Plates Using the 8-Node Quadrilateral	390

11.6.1 Main Program: Thick_plate_Q8.m.....	390
11.6.2 Data Preparation	395
11.6.2.1 Stiffness Matrices	395
11.6.2.2 Boundary Conditions	395
11.6.2.3 Loading	396
11.6.2.4 Numerical Integration of the Stiffness Matrix.....	397
11.6.3 Results.....	398
11.6.3.1 Determination of the Resulting Moments and Shear Forces	398
11.6.3.2 Contour Plots.....	399
11.7 Analysis with Abaqus	400
11.7.1 Preliminary	400
11.7.1.1 Three-Dimensional Shell Elements	401
11.7.1.2 Axisymmetric Shell Elements	401
11.7.1.3 Thick versus Thin Conventional Shell	401
11.7.2 Simply Supported Plate.....	401
11.7.3 Three-Dimensional Shells	406
Appendix A: List of MATLAB® Modules and Functions	419
Appendix B: Statically Equivalent Nodal Forces	445
Appendix C: Index Notation and Transformation Laws for Tensors	447
References and Bibliography	453
Index.....	455
